Objective

Aiming to leverage my expertise as a DevOps Engineer to contribute to your team's success. Seeking an opportunity to use my cloud infrastructure and automation skills to enhance efficiency and reliability.

Experience Summary

- Over a decade of extensive IT experience, specializing in roles such as Cloud Infrastructure Engineer and Linux Administrator, with expertise in Unix/Linux systems, virtualization, and server maintenance.
- Deep expertise in DevOps practices, particularly in Kubernetes, Terraform, Ansible, Helm Charts, Jenkins, Git, Docker, Trivy, Prometheus, Elastic Stack, Grafana, Sonarqube, Gitleaks and Nexus, ensuring efficient and scalable operations.
- Proficient in automation of infrastructure and deployments using Python, Ansible, and other tools, driving efficiency and consistency.
- Extensive experience in designing and deploying cloud infrastructure on platforms like AWS, Azure, and GCP, utilizing Terraform, Ansible, and Python for automation and configuration management.
- Demonstrated expertise in Cloud Computing, DevOps, and Virtualization, with a proven ability to design, implement, and deploy robust and scalable solutions.
- Skilled in developing and managing CI/CD pipelines using tools such as Jenkins and GitLab CI/CD, and frameworks like Ant and Maven, supporting SaaS, PaaS, and IaaS solutions.
- Successful delivery of Telecom and Cybersecurity projects on a global scale, leveraging cloud platforms like Azure, AWS, and GCP.
- Experienced in setting up virtualized environments and proficient in troubleshooting complex system issues.
- Played a pivotal role in requirement analysis, system design, and decision-making for efficient project execution and delivery.
- Exceptional communication and client-handling skills, backed by extensive onsite experience across international projects.

Professional Experience

DevOps Engineer, Trasna Solutions FZ LLC

10/2020 – present | Dubai, UAE

- Over a decade of experience in **DevOps, Cloud Infrastructure Engineering, and Linux Administration**, specializing in scalable and resilient solutions.
- Orchestrated Linux infrastructures for seamless solution deployments.
- Proficient in intricate installation, configuration, and administration of VMware Infrastructure tailored to project specifics.

- Adept in Kubernetes cluster administration across diverse environments (cloud: AKS, EKS, GKE; on-premises: Kubeadm).
- Skillfully bootstrapped Kubernetes clusters in **cloud** (AKS, EKS, GKE) and **on-premises** environments from scratch, ensuring resilience and scalability.
- Proactively monitor and test application performance, identifying and rectifying potential bottlenecks.
- Collaborate with developers to optimize system performance using cutting-edge solutions.
- Conduct precise OS level upgrades (OS patching) on Linux for a fortified system with the latest enhancements.
- Proficiently deploy Microsoft Azure cloud infrastructure using Ansible and Terraform (AKS, Virtual Machines, Postgres Flexible Server, VMSS, ACR) with a focus on high availability.
- Advanced skills in bootstrapping Kubernetes clusters and deploying GCP infrastructure using Terraform.
- Design CI/CD processes with Jenkins orchestration, integrating automated build, test/QA, and deployment tools.
- Utilize GIT for meticulous source code management, featuring push-pull events for automated builds, test case execution, and more.
- Proficient in writing inventory files, ansible configurations, and creating playbooks in Ansible for streamlined configuration and deployment activities.
- Proficient in Docker, from installation using toolbox to creation of custom Docker container images, tagging, and pushing images.
- Kubernetes proficiency for managing containerized applications, including configuration of maps, selector services, and deployment of application containers as Pods.
- Automation excellence using Ansible for infrastructure provisioning and management.
- Ensure a consistent environment throughout the deployment pipeline with Kubernetes, facilitating scaling and load balancing.
- Implemented robust infrastructure monitoring using Prometheus and Grafana.Craft Grafana dashboards tailored to specific requirements, ensuring comprehensive visibility.
- Configure and maintain Nexus as a private artifact repository, skillfully managing Jenkins Builds, Docker images, and Linux artifacts with precision.

System Integrator, Verint Systems

07/2019 – 10/2020 | Gurgaon, India

- Led solution integration for Verint Cybersecurity Projects worldwide.
- Spearheaded Uzbekistan Govt Project as Global System Integration Engineer.
- Prepared Linux infrastructure for solution deployment.
- Installed, configured, and administered Hadoop clusters and ecosystems.
- Managed Apache Hadoop cluster and its ecosystem.
- Tuned performance, managed lifecycle, and troubleshooted Hadoop cluster jobs.
- Utilized DevOps tools like Ansible and Docker containers.
- Installed and managed server hardware (Dell PowerEdge FC 630, HP DL360P Gen8).
- Configured VMware infrastructures as per project requirements at client sites.
- Created, managed, and configured virtual machines, clones, templates, and vApps.
- Configured third-party hardware supporting application and solution deployment.
- Configured all hardware and networking components based on LLD and HLD documents.
- Monitored and tested application performance, identifying and implementing fixes.
- Executed end-to-end delivery from deployment to customer ATP at client locations.
- Conducted sanity tests to ensure application flow before QA assessments.
- Contributed to the design of information and operational support systems.
- Provided 1st and 2nd level support and acted as SPOC at client locations.
- Ensured effective communication with clients and multiple stakeholders.

IT Analyst, Tata Consultancy Services

01/2017 – 07/2019 | Gurgaon, India

- Part of the Apple Linux team.
- Worked as System Engineer for the Apple project
- Supported Apple Project to Manage the Data centers in the U.S.A
- Virtual / Standalone Machine building managing and troubleshooting
- Configured Virtualized environment as per customer requirement.
- Worked on virtualized platform upgrade for VMware.
- Co-ordination product releases, handling DEV, TEST (UAT & IT), MAINT, and PROD servers
- Delivered end-to-end products from installation to Customer ATP.
- Deploy Virtual machines on the OVM hypervisor and troubleshoot
- Patching Linux servers with provided patch and UEK kernel
- Version control system GIT.
- Worked with VMware, and Red hat support teams to resolve various technical issues.
- Installing, configuring, and administering Linux Operating System through Kickstart.
- Monitoring all the servers and storage and resolving the issues within the predefined SLA defined by the Client

- Planning of Activity & preparing an Action plan and raising a change request
- Performed Live E2E upgrade without affecting live services.
- Communicated well with clients and other stakeholders involved in the project team.

System Administrator, HCL Infosystems LTD 06/2013 – 01/2017 | Lucknow, India

- Provided onsite support to IIT Kanpur and contributed to the IT Support team.
- Installed and configured Linux and Windows server operating systems.
- Supported Dell Enterprise products and performed security upgrades and patches.
- Proficient in troubleshooting Linux server OS-related issues.
- Managed Datacenter for various projects, including UIDAI.
- Monitored servers and storage, resolving issues within predefined SLAs.
- Collaborated with clients on future sprint planning and upgrades.
- Worked with Informatica and Redhat technical teams to troubleshoot project issues.
- Maintained effective communication with clients and project stakeholders.

Education

Diploma in Electronics Engineering, 06/2010 – 03/2013 | India
Gov Polytechinc collage Thirurangadi

Higher Secondary, GHHS Kuzhimanna Malappuram 06/2008 – 03/2010 | India

Secondary, KKMHS Cheekode Malappuram 2007 – 2008 | India
